

# SUSTAINABILITY BY THE SEA

## WATER & ENERGY CONSERVATION

- **Drip Irrigation & Reclaimed Water** - Our landscaping uses a Drip Irrigation system, which uses 50 to 80% less water than a traditional sprinkler system. We also irrigate with reclaimed water that is purified through a less-invasive and energy-saving process.
- **Laundry Water Conservation** - Our laundry rooms feature AquaRecycle, a system to conserve water and save energy by reusing the water of the latest spin cycle to pre-wash the newest load of laundry.
- **MeLink** - Above every kitchen stove is a MeLink smart hood system, which senses heat, smoke, and movement – intuitively powering down the stove when not in use.
- **HVAC System** - The Building Automation System is a high-tech HVAC feature that continually monitors and controls the air conditioning based on real-time temperature.

## RECYCLE GOODS & ELIMINATE WASTE

- **Organic Food & Cooking Oil** - In our kitchens, all excess cooking oil and organic food scraps are discarded in separate bins during clean-up, which are later collected by a third-party partner to be converted into biodiesel.
- **E-Waste** - Any electronic goods, such as lightbulbs, computers, monitors, and batteries are disposed of through specialty partners in an eco-friendly manner.
- **Cardboard** - Cardboard accounts for over half the trash of a typical business. The resort sorts, bales and recycles our cardboard to minimize our total waste.
